

Heino, J. et al. 2012. Context dependency and metacommunity structuring in boreal headwater streams. – *Oikos* 121: 537–544.

Appendix A1

Figure A1. Variation in the site scores of each PCNM variable (SF#) along north (y -axis) and east (x -axis) coordinates in the Koutajoki drainage basin. The larger the black dot, the higher the positive value for a site; the larger the white dot, the higher the negative value for a site. Spatial filters SF1 and SF2 represent large-scale variation, SF3 and SF4 intermediate-scale variation, and SF5 and SF6 small-scale variation.

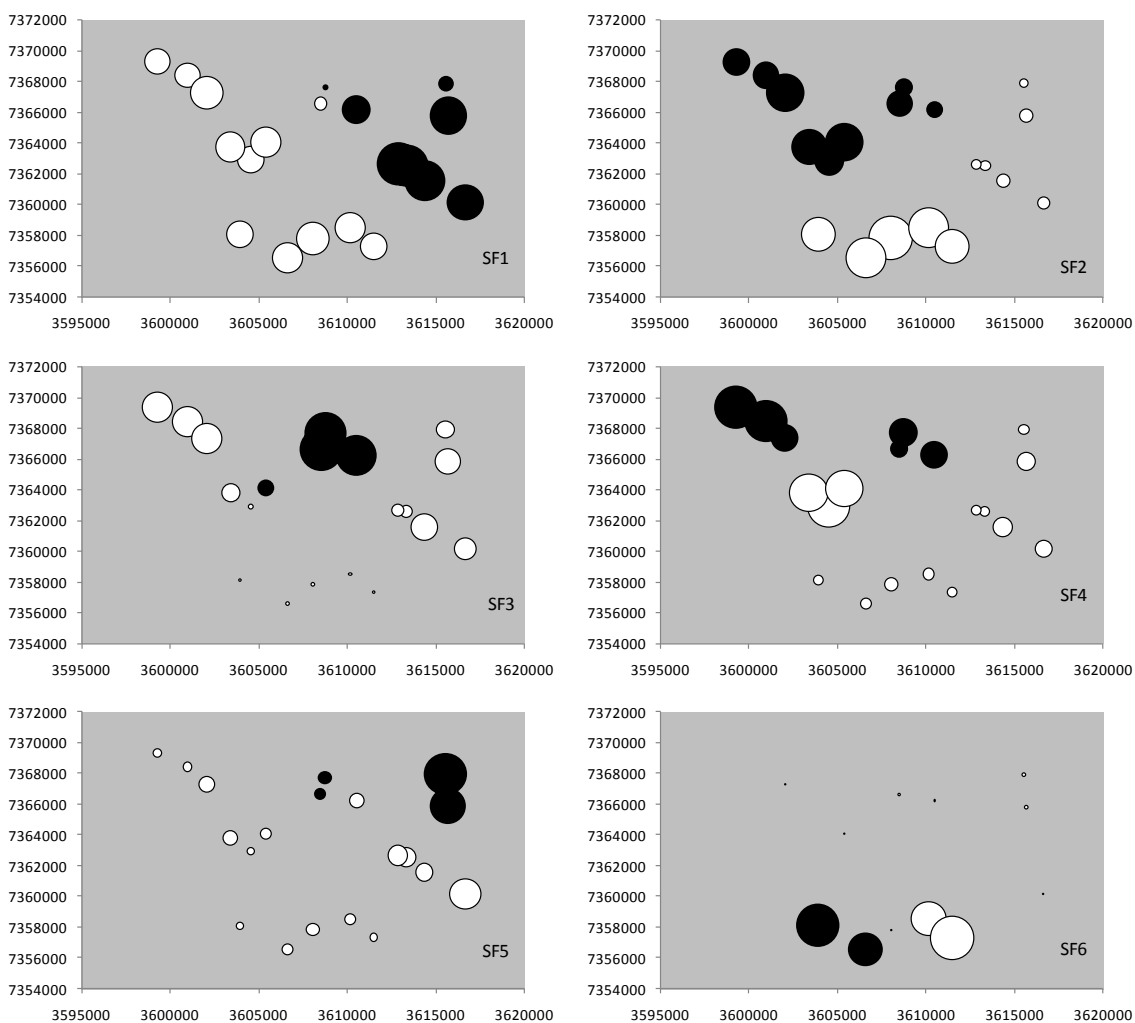

Figure A2. Variation in the site scores of each PCNM variable (SF#) along north (y -axis) and east (x -axis) coordinates in the Iijoki drainage basin. The larger the black dot, the higher the positive value for a site; the larger the white dot, the higher the negative value for a site. Spatial filters SF1 and SF2 represent large-scale variation, SF3 and SF4 intermediate-scale variation, and SF5 and SF6 small-scale variation.
