

Matthews, T. J., Borges, P. A. V. and Whittaker, R. J. 2013. Multimodal species abundance distributions: a deconstruction approach reveals the processes behind the pattern. – Oikos doi: 10.1111/j.1600-0706.2013.00829.x

## Appendix 1

Table A1. Ecological information for the arthropod species used in this study, including species name and associated class, mean body size, origin status, ecological guild, and level of dispersal ability. Origin status refers to whether a species is endemic to the Azores (E), introduced (I), or native but non-endemic (N). Guild: P = predator, H = herbivore, F = fungivorous, S = saprophagous. All species presented are arthropods from the Azores and were sampled in the native Laurisilva forest using a standardised pitfall trap and canopy beating methodology between 1999 and 2004.

Class	Species	Mean body size (mm)	Origin	Guild	Dispersal ability
Arachnida	<i>Acorigone acoreensis</i>	1.3	E	P	high
Arachnida	<i>Acorigone zebraneus</i>	1.33	E	P	high
Arachnida	<i>Agyneta decora</i>	2.75	I	P	high
Arachnida	<i>Agyneta rugosa</i>	1.75	E	P	high
Arachnida	<i>Agyneta</i> sp. 1	1.26	?	P	high
Arachnida	<i>Araneus</i> sp. 1	4.32	I	P	low
Arachnida	<i>Cheiracanthium erraticum</i>	6.63	I	P	low
Arachnida	<i>Cheiracanthium floresense</i>	8.15	E	P	low
Arachnida	<i>Cheiracanthium jorgeense</i>	6.25	E	P	low
Arachnida	<i>Chthonius ischnocheles</i>	2	I	P	low
Arachnida	<i>Chthonius tetrachelatus</i>	1.61	I	P	low
Arachnida	<i>Clubiona decora</i>	6	N	P	low
Arachnida	<i>Clubiona terrestris</i>	6	I	P	low
Arachnida	<i>Cryptachaea blattea</i>	3	I	P	low
Arachnida	<i>Dysdera crocata</i>	11.25	I	P	low
Arachnida	<i>Emblyna acoreensis</i>	2.4	E	P	low
Arachnida	<i>Eperigone</i> sp. 1	1.81	I	P	high

---

Arachnida	<i>Erigone atra</i>	2.33	I	P	high
Arachnida	<i>Erigone autumnalis</i>	2.1	I	P	high
Arachnida	<i>Erigone dentipalpis</i>	2.3	I	P	high

## Appendix 2

Table A2. Likelihood ratio test results for the twelve fragments and five islands of arthropod data from the Azores. LRS = likelihood ratio statistic, p-value = the p-value based on a  $\chi^2$ -distribution with the degrees of freedom (DF) in parentheses for each set of model comparisons. PLN1, 2, 3 = the one, two and three mode Poisson lognormal distributions respectively. As likelihood ratio tests are only applicable when considering nested models the logseries distribution has been excluded.

Fragments						
Code	PLN1/PLN2 (DF = 3)		PLN2/PLN3 (DF = 3)		PLN1/PLN3 (DF = 8)	
	LRS	p	LRS	p	LRS	p

## Appendix 3.

Table A3. The model selection results for the core (a) and satellite (b) species subsets at both the fragment and island scale. Data are for arthropod species from the Azores. Both BIC and  $AIC_c$  are presented. NA represents a situation in which we were unable to get the model to converge irrespective of the different starting values used in the parameter search. Due to convergence issues the PLN2 was not fit to the satellite subsets at either scale.

### (a) Core species

Code	Fragments
