Descamps, S., Boutin, S., Berteaux, D. and Gaillard, J.-M. 2008. Age-specific variation in survival, reproductive success and offspring quality in red squirrels: evidence of senescence. - Oikos 117: 1406-1416.

Appendix 1. Results of the model selection for capture rates of North American red squirrels, Kluane, Yukon, Canada. Models in bold represent selected models. Survival rates were defined as $\phi(a \times t)$. Dev indicates the deviance of the model, $\triangle$ AICc the difference in AICc between the model considered and the model with lowest AICc.

| Models | np | Dev | AICc | $\Delta$ AICc | np | Dev | AICc | $\Delta$ AICc |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- |
| $\mathrm{p}(\mathrm{t})$ | 83 | 1203.147 | 7.689 | 3.342 | 80 | 792.118 | 966.680 | 5.598 |

t: time; a: age (full-age dependant model); e: capture effort intensity

Appendix 2. Age effect in North American red squirrels, Kluane, Yukon, Canada. Litter size corresponds to litter size at birth, and Bequeathal to the bequeathal behaviour of females ( 3 modalities: kept; gave away part; gave away all). $\mathrm{n}_{\text {obs }}$ indicates the number of measurements (or number of ' 1 ' in the matrices of presence-absence used for survival analyses based on capture-recapture data) and $n_{\text {ind }}$ the number of individuals measured. Dev indicates the deviance of the model, $\triangle$ AICc the difference in AICc between the model considered and the model with lowest AICc, and $\mathrm{w}_{\mathrm{i}}$ the AICc-weight of the model considered. Models in bold represent selected models.
