

Rzanny, M., Kuu, A. and Voigt, W. 2013.
Bottom-up and top-down forces structuring
consumer communities in an experimental
grassland. – Oikos 122: 967–976.

Appendix 1

Map of the plot scores of PCNM axes 1,2, and 7 plotted against the geographic plot coordinates. Square sizes are proportional to the score values of the sites. Open symbols represent negative values, filled symbols represent positive values.

Appendix 2

Total variance of consumer functional group composition explained by the different predictor variables (plant functional group composition, plant biomass (biomass), plant species richness (SR), number of plant functional groups (FR), herbivore functional group composition (only for carnivore functional groups) and carnivore functional group composition). The dark colored fractions of the bars represent independent effects, light colored fractions represent shared effects. Consumer functional groups, independently and significantly ($p < 0.05$) affected by the respective variable are marked by an asterisk.
